REACT I

REACT HOOK FORMS

```
yarn add react-hook-form
```

```jsx
import React from "react";
import { useForm } from "react-hook-form";

export  function Formulario() {
    const { register, handleSubmit, watch, formState: { errors } } = useForm();
    const onSubmit = data => console.log(data);
    console.log(watch("example")); // watch input value by passing the name of it
    return (

        <form onSubmit={handleSubmit(onSubmit)}>
            <input defaultValue="test" {...register("example")} />
            <input {...register("exampleRequired", { required: true })} />
            {errors.exampleRequired && <span>This field is required</span>}
            <input type="submit" />
        </form>
    );
}
```

```
<input {...register("campo2", { required: true, onBlur:(v) => {onBlur(v)} })} />
```

```
function onBlur(e){
    console.log(e.target.value)
    setValue("campo3", e.target.value)
  }
```

Set un valor

```
</> useForm
  ├── </> register
